

So, You **THINK** You Can Nomenclature???

Checking your understanding of terms you ***should*** be familiar with!

no·men·cla·ture

/ˈnōmənˌklāCHər/ 🔊

noun

the devising or choosing of names for things, especially in a science or other discipline.

What do we call the underlined portion of these lines of code?

```
int num1 = 9;
```

```
double num2 = 10.1;
```

```
char letterGrade = 'A';
```

```
string fullName = "John Doe";
```

Data types!

What do we call the underlined portion of these lines of code?

```
int num1 = 9;
```

```
double num2 = 10.1;
```

```
char letterGrade = 'A';
```

```
string fullName = "John Doe";
```

Literals!

What do we call the underlined portion of these lines of code?

```
int num1 = 9;
```

```
double num2 = 10.1;
```

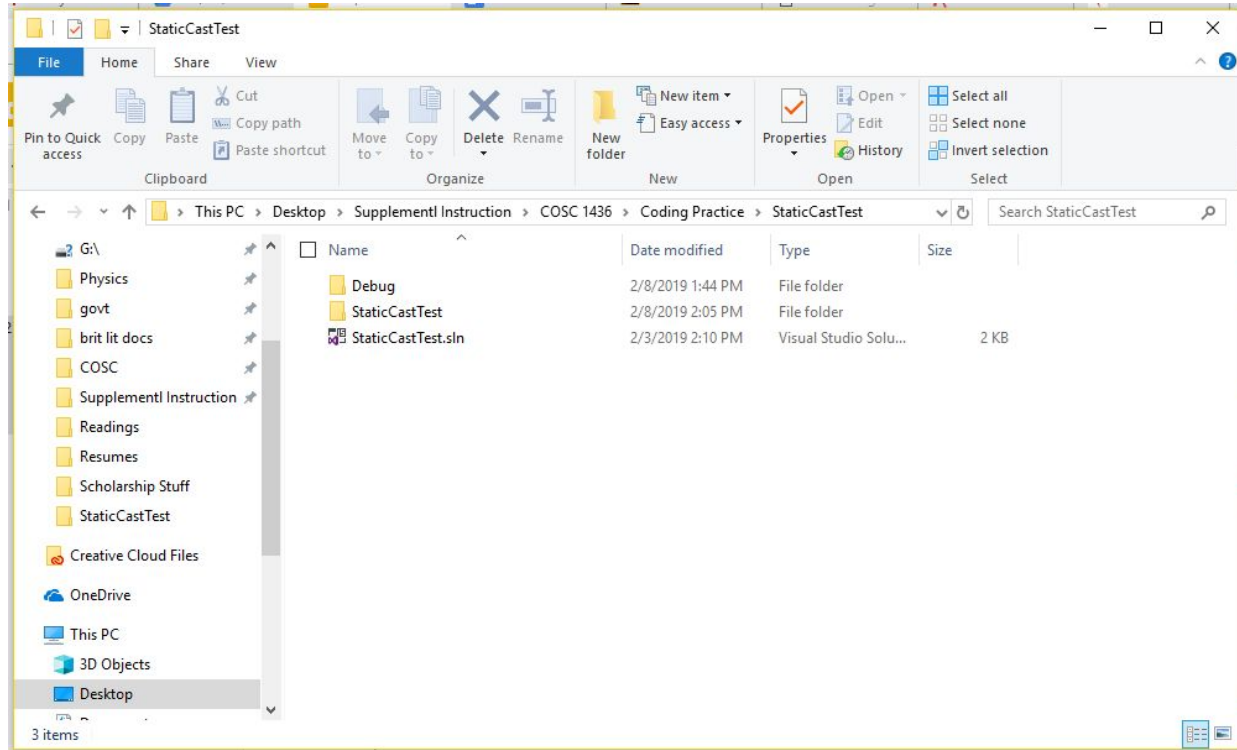

```
char letterGrade = 'A';
```

```
string fullName = "John Doe";
```

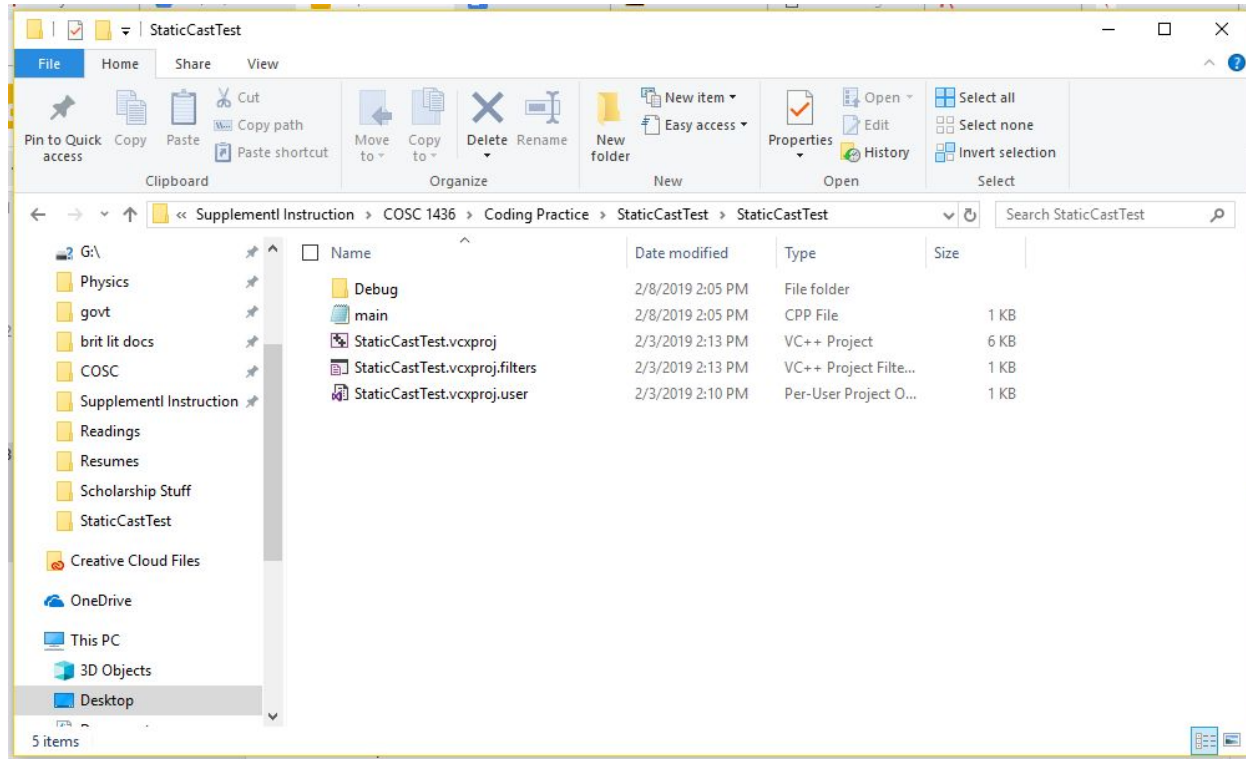

Variables!

What is the proper name for this? (hint: what type of folder are we in?)

The solution folder

What is the proper name for this? (hint: what type of folder are we in?)

The project folder

So, you made it this far.
Let's discuss nomenclature
associated with modular
programming.

What is this an example of?

```
calcValues () ;
```

A function call

What is this an example of?

```
int calcValues() {}
```

A function header

What is the highlighted portion an example of?

```
void sayHi()
```

```
{
```

```
    cout << "Heyo!";
```

```
}
```

A function definition

What is this an example of?

```
string fullName(name1, name2) ;
```

A prototype
